

More Application features of the FSAR Funeral program:

- Note areas are placed on many pages to allow you the freedom to add details and lengthy messages. In addition, an entire page is dedicated to open text. This can even be used to 'draw' an outline of a grave plan.
- Historical information is easily retrieved. You can generate many reports to help make decisions about your operations. You can track inventory usage as well as monies paid to specific vendors.

The FSAR Funeral program is a fully Internet based application.

YOU CAN:

- Do work from anywhere with any web-based device. You can, for example, make arrangements in a family's home, print the contract and other pertinent documents, write the death notice, view the death notice on your website, modify the notice as requested by the family, and e-mail the notice directly to the newspaper.
- Keep in touch with your families and the greater community. Since your system is integrated with your web site, relatives and friends can check your web site to find out the time and place of services and other specifics. You can even make a recording of the services available to out-of-town mourners.
- Keep tabs on the operations of your business from outside the office.
- Take death calls from your home and converse while having full access to all files, family history, documents, inventory, schedules, etc.
- Forget about losing critical data. All your records are replicated on multiple computers. This is done automatically each evening.
- Forget about computer viruses. Your data will be secure from eavesdropping and hacking, even if using a computer at a public 'hot spot'.
- Forget about computer downtime -- your data resides on multiple servers in different cities. If weather or hardware failure strikes your primary source, just go to the alternate web site to reference all your information.
- Forget about purchasing any sophisticated and expensive computer equipment. Again, your data resides on multiple high-end computers that are built to run 24-7-365. You can run your business with a \$400 notebook device and a \$100 ink jet printer. Even your web-enabled telephone will work.
- Relax, knowing that your application and web support team is the best in the business. We have staff that have been working in the computer field since the days we refer to as 'First Generation'.

Other General features of the FSAR Funeral program:

- **SCALABLE:** Whether you have 1 employee or 100, it doesn't matter. The smaller outfit can now afford the same system that can handle that large business, and that means the application will continue to be functional and efficient as your company grows.
- **SECURE:** Whether or not you are that larger company, you are going to be concerned with 'who can do what'. When a user logs into the application, he/she is assigned access as you determine. You can restrict access to functional groups, such as Office Employees or Management or Directors. You can assign reference permission only, or allow updating only on specific 'pages'. Data travels over the net in an encrypted state. This technology has proven to be safe for even the most security critical applications such as credit card transactions.
- **FLEXIBLE:** This is not a fixed formatted program. An FSAR representative will work with you to customize the installation to suit your needs. We will personalize your funeral contract, bills, and anniversary reminders. We can even do specific programming if your business has unusual situations that you deem necessary to differentiate your business from the competition. Export programs are provided to facilitate movement of data to a spreadsheet, mail merge programs, or General Ledger.

Fully Internet-Based Software

Allowing you to work from any location!

Application features of the FSAR Funeral program:

- Retains separate but linked Pre-Need and At-Need charges. Allows easy transition from Pre-Need to At-Need without losing the original record. Links to relatives are maintained as well as links to Billing and Accounts Receivable information.
- All documents signed by the family can be scanned and attached to their computer record as a multi-page 'PDF' file. That means you can reference or print one or more those documents at any time.
- Up to eight Pre-Need and At-Need bills can be stored. These can be reprinted at a later date and a cumulative bill can also be produced. Funeral charges can easily be split among family members and separate statements sent to the parties. Multiple copies of the same bill can also be mailed to different family members and/or estate representatives. This feature also applies to the mailing of certified copies of the Death Certificate.
- All standard Price List items and Inventory items can be user-programmed to auto-populate as the charges page is being entered, reducing the chance of error. Of course, you may override standard pricing if desired.
- Cemetery opening charges, overtime charges, and other fees can also be user-programmed to auto-populate when the service's date, time, and cemetery is specified.
